Saunum Professional Series

Saunum Professional Series is a two-in-one solution – a working combination of indoor climate device and an electric heater. This solution has been especially designed for SPAs, public and larger saunas.

How it works?

An indoor climate device mixes the steam from upper levels and cold air from the lower levels. The air layers and steam are mixed inside the device and a smooth airsteam mixture comes out of the device that ensures a more even temperature throughout the sauna room.

Power	12 / 15 / 18 / 23 kW
Size of sauna	14-40 m ³
Amount of stones	200-220 kg
Size of stones	5-10 cm
Height	2150-2350 mm
Depth	600 mm
Width	750 mm
Different airflow speeds	3
Weight	86 kg
Safety distance from the heater	250 mm on the sides, 250 mm on the front

What changes?

- The steam is longer and softer for the whole body
- Active sweating is increased
- The sauna session is longer
- A sauna session has a stimulating effect

The device also adds Himalayan salt ions into the air, which have a healthy effect on the skin and respiration system.

Electrical heater with indoor climate device
